#### Reconcile Inventory:

This screen is used to capture the provider's monthly physical inventory. The physical inventory should be entered in the "refrigerator count" column.

Providers who use the registry fully may have an automated "expected inventory" count generated by the computer.

Discrepancies between the computer generated number and the physical count can be explained using the reason field, which is a drop down menu.

Vaccine Order Screen:

This is the screen where provider orders are placed for each antigen – either by the LHJ or by the provider. Orders can be saved for completion later, cancelled, or submitted.

If historical data is available in the system, an order recommendation will appear. Vaccine brands and presentations will be limited to those provided by DOH.

### Provider Order Adjustment Screen:

Allows LHJ to review provider address information for correctness. LHJs will also review each provider order, make adjustments, and indicate why an adjustment was made. Lot information will not be on this screen because lot numbers will be attached at the time of shipment, not the time the order is placed.

### Order Receipt and Acceptance:

This screen allows providers (or LHJs on behalf of providers) to check in vaccines they receive. This is the screen that will display the shipping information from the distributor, and is expected to flow through DOH to LHJs and on to providers electronically through CHILD Profile Immunization Registry Vaccine Management and Ordering Module.

### Transfer Management Screen:

Allows LHJs to identify provider to provider or LHJ to provider transfers and approve them.

**RE: pgs 14 and 15 : Temperature log reporting:** Each refrigerator or freezer unit in a provider office can be entered into the data base, and temperature reports submitted. Recording temperatures in the system allows providers who use the registry for tracking immunizations to easily generate reminder recall notices for children who were vaccinated when units were not at the correct temperature. Full use of the registry is required for this function.

The level of participation by a provider determines the degree to which vaccine management functions can be automated in the system. It is possible for the registry to capture all inventory management tasks (including wasted, spoiled or expired vaccines, monitoring monthly inventory and reconciling inventory); doses administered (vaccinations administered reports from the registry); temperature reporting, and reminder recall.
